MARK GEOFFREY A. BATOCABE

GoHighLevel Automation Specialist | Full-Stack Developer (MERN / .NET)

Pagbilao, Quezon, Philippines • batocabemarkgeoffrey@gmail.com • 0994-694-4768 • Open to Remote Opportunities

PROFESSIONAL SUMMARY

GoHighLevel (GHL) Specialist and Full-Stack Developer who builds complete client-acquisition systems, not just chat automations. Has independently designed, built, and documented three end-to-end GHL portfolio systems — covering CRM/pipeline architecture, multi-step conditional automations, AI-powered conversational agents, funnels, booking/calendar logic, and reporting dashboards — while integrating tools like Make.com, Stripe, Twilio, Mailgun, and Looker Studio. Pairs this with a strong software engineering foundation (MERN stack, C#/.NET, RESTful APIs, JWT/RBAC security) to troubleshoot integrations, customize workflows beyond no-code limits, and collaborate seamlessly with development teams.

CORE SKILLS & TECHNICAL EXPERTISE

GoHighLevel (GHL): Sub-account setup & branding, custom fields/tags, pipeline/opportunity architecture, forms, calendars (buffers, multi-staff scheduling, Zoom integration), funnels & landing pages, Conversation AI / AI receptionist bots, reputation management, snapshot export, agency/SaaS white-label concepts.

Integrations & Automation: Make.com (multi-step cross-platform scenarios, webhook triggers, data mapping), Stripe (payment links, test deposits), Twilio (SMS/voice configuration), Mailgun (email delivery, DNS verification), Looker Studio (reporting dashboards), Zoom, Zapier.

Software Development: JavaScript (ES6+), TypeScript, C# (.NET / ASP.NET Core), React.js, Next.js, Node.js, Express.js, React Native, RESTful APIs, JWT Authentication, Role-Based Access Control (RBAC).

Data & AI Tooling: MongoDB, MS SQL Server (T-SQL), PostgreSQL, Python (Pandas, NumPy, Matplotlib), Power BI, ChatGPT & Claude (prompt design, script refinement, edge-case testing).

GOHIGHLEVEL (GHL) PORTFOLIO PROJECTS

1. BrightSmile Dental Clinic — AI-Powered Patient Acquisition & Retention System (20-Day Solo Build)

- Architected a 7-stage sales pipeline, custom fields, and a 5-page responsive website/funnel with landing pages driving form submissions directly into the CRM.
- Built native GHL automations for lead nurture, appointment reminders, no-show recovery, birthday/recall campaigns, and review-request reputation management.
- Trained an AI receptionist in GHL Conversation AI, utilizing ChatGPT and Claude to draft FAQ/booking scripts and stress-test edge-case patient questions.
- Connected cross-platform automation via Make.com (GHL -> Notion), Stripe test-mode deposits, Twilio SMS, Mailgun email sequences, and Zoom virtual consultation booking.
- Delivered a Looker Studio reporting dashboard, exported reusable snapshot, and full documentation trail across Notion and Google Drive.

2. Nolan & Co. Realty — Real Estate Lead-Generation MVP (9-Day Solo Build)

Documentation: https://app.notion.com/p/Nolan-Co-Realty-3ca7113faf3d80258c6ec526f68c2621

- Branded a dedicated sub-account and built a 6-stage pipeline, mobile-responsive landing page, and lead capture form mapped directly into custom CRM fields.
- Designed an instant-response workflow (email + SMS fallback) and a 5-day nurture sequence with conditional exit logic tied to booking activity.
- Built and linked a booking calendar that automatically advances pipeline stage and triggers agent notifications upon appointment confirmation.
- Executed a testing plan across 3 lead personas plus a mobile QA pass, closing with zero unresolved bugs on final validation.

3. Ferrow Air & Heat — Home Services (HVAC) MVP (9-Day Solo Build)

Documentation: https://app.notion.com/p/Ferrow-Air-Heat-3ca7113faf3d80e995f6e43407b3732f

- Built a 10-stage pipeline and a service-request form with a qualification workflow branching leads into Emergency / Standard / Out-of-Area paths.
- Engineered a 6-workflow automation system handling booked, no-show, completed, review request, and seasonal reactivation states.
- Documented system architecture, CRM design, and automation logic for every workflow as part of a formal Documentation Plan.

FULL-STACK SOFTWARE & DATA PROJECTS

Full-Stack EMR System with AI Integration (Thesis Project | MERN Stack + AI)

Live App: https://cecc-test.vercel.app/

- Architected a MERN-stack Electronic Medical Record system streamlining patient management, electronic records, and appointment scheduling.
- Engineered an AI-powered Ishihara color vision test for preliminary diagnostic screening. Implemented RBAC and JWT authentication with sub-second query latency.

Data Analytics & Predictive Modeling (Python | Power BI)

Repository: https://github.com/geoffreymamcer/ITELEC_Activities.git

- Executed end-to-end Python data pipelines cleaning and analyzing 3+ real-world datasets (Chicago Crime, UK Road Accidents).
- Synthesized insights with Matplotlib and Power BI dashboards and applied regression/classification algorithms to forecast safety trends.

PROFESSIONAL EXPERIENCE & EDUCATION

Web Developer and Clerical Intern — Quezon National Highschool, Lucena City

Feb 2026 – Jun 2026

- Developed and deployed a locally hosted web application for HR to centralize and digitize 300+ faculty records, reducing manual paperwork.
- Engineered an automated license expiration tracking tool ensuring regulatory compliance for teaching staff.

Bachelor of Science in Information Technology (BSIT)

Dalubhasaan ng Lungsod ng Lucena (City College of Lucena) | 2022 – 2026

Specialization: Web and Mobile Application Development

APPENDIX: GOHIGHLEVEL 9-DAY BOOTCAMP SPECIFICATION & CASE STUDY

Home Services (HVAC) MVP Portfolio Implementation Blueprint

This appendix provides the complete system architecture, CRM design, workflow routing, and testing log for the Ferrow Air & Heat GHL implementation demonstrating senior-level GHL workflows, state management, and error handling.

1. Business Profile & Conversion Objective

- Target Business: Ferrow Air & Heat (HVAC Emergency Repair, Maintenance, Quote Services).
- Core Business Problem: Inquiries across phone, form, and word-of-mouth were lost due to slow manual follow-up and inability to prioritize emergency calls over routine maintenance.
- Key Conversion Goal: Get submitted service requests to a confirmed appointment in under 5 minutes with zero lost leads.

2. 10-Stage Pipeline Architecture & Custom Fields

- Pipeline Stages: New Lead -> Contacted -> Qualified -> Estimate/Visit Scheduled -> Estimate Sent -> Decision Pending -> Job Scheduled -> Job Completed -> Won -> Lost/Not Qualified.
- Custom Fields: Service Type (Emergency, AC Repair, Heating Repair, Quote, Maintenance), Property Type, Urgency Level, Estimated Job Value, Preferred Appointment Date, Lead Source.

3. 6-Workflow Automation Engine

- Workflow 1 (New Intake): Form submitted -> Contact creation -> custom field tagging -> office team instant notification.
- Workflow 2 (Lead Qualification): Conditional branching on Urgency (Emergency -> high-priority SMS/alert; Standard -> standard follow-up; Out-of-Area -> polite referral response).
- Workflow 3 (Appointment Booking): Booking confirmed -> pipeline state advance -> nurture exit -> customer SMS/email confirmation.
- Workflow 4 (Reminder & State Management): Multi-step reminder cadence (24h, 2h) -> branching into Completed vs. No-Show.
- Workflow 5 (No-Show & Unbooked Recovery): Automated rebooking nurture with conditional time delays.
- Workflow 6 (Review Request & Seasonal Reactivation): Post-service review invitation -> 6-month seasonal tune-up reactivation sequence.

Verified and compiled by Mark Geoffrey A. Batocabe — Available for Remote and On-Site GHL / Full-Stack Roles.
