SUMMARY

GoHighLevel automation specialist who builds lead-to-booking, lead reactivation, and payment collection systems: CRM pipelines, conditional workflows, AI assistants, and integrations. A full-stack development background (MERN, C#/.NET) lets me go beyond GHL's built-in features with webhooks, APIs, n8n, and custom AI logic. Every build ships tested, documented, and with a walkthrough video.

SKILLS

- **GoHighLevel:** pipelines, custom fields and values, workflows (If/Else, goal events, math, webhooks), funnels and forms, calendars, Conversation AI, smart lists, dashboards, snapshots
- **Automation and AI:** n8n, Make.com, Zapier, Google Apps Script, Gemini API, REST APIs, webhooks, Slack, Google Sheets, A2P/TCPA and DND compliance
- **Development:** JavaScript, TypeScript, React, Next.js, Node.js/Express, C#/ASP.NET Core, MongoDB, SQL, Git/GitHub
- **Delivery:** QA test plans, system guides for client teams, Loom walkthroughs, Notion case studies

PORTFOLIO PROJECTS

Demo builds on simulated data, each with a video walkthrough and case study.

AI Dead Lead Reactivation System (Real Estate) | *GoHighLevel, n8n, Gemini, Slack*

- Built an n8n reply engine where Gemini classifies every lead reply into 7 intents and routes it to a booking link, a clarifying question, a knowledge-base answer, a Slack escalation, or an opt-out.
- Scored and tiered old leads by recency, deal value, and inquiry type, then ran tiered GHL outreach capped at 5 touches with a daily silent-lead check.
- Enforced opt-outs with DND in GoHighLevel and added a fail-safe JSON parser; passed all 6 end-to-end QA scenarios.

BrightSmile Lead-to-Booking System (Dental Clinic) | *GoHighLevel, Make.com, Google Sheets*

- Built 10 workflows covering speed to lead with a 5-day nurture, confirmations and reminders, no-show recovery, cancellations, review requests, and missed-call text-back.
- Added a Conversation AI assistant that answers FAQs and books into the calendar, plus lead scoring that creates a 15-minute call task for hot leads.
- Ran a 19-item QA checklist, fixed edge cases such as duplicate status tags after a rebook, and delivered a dashboard, system guide, and snapshot.

AR Payment Chasing Automation | *GoHighLevel, Google Apps Script, Gemini*

- Built an Apps Script rules engine that ages invoices hourly and drives a 4-stage GHL reminder ladder that stops on payment or reply.
- Limited Gemini to wording, with validation and a template fallback; passed 23/23 test scenarios and 7/7 failure drills for about $0.13 in total AI cost.

Ferrow Air & Heat (HVAC) and Nolan & Co. Realty | *GoHighLevel*

- Built an HVAC system with a 10-stage pipeline and emergency, standard, and out-of-area routing across 6 workflows, and a real estate system with instant response and a 5-day nurture.

EXPERIENCE

Web Developer and Clerical Intern | Quezon National High School — Feb 2026 – Jun 2026

- Developed and deployed a locally hosted HR web application that centralized records for 300+ faculty members, replacing manual paperwork.
- Built an automated tracker that flags expiring teaching licenses so HR can keep staff compliant.

EDUCATION

BS Information Technology, Web and Mobile Application Development | City College of Lucena — 2022 – 2026

- Thesis: MERN-stack EMR system for an eye care clinic, with an AI-powered Ishihara color vision test and JWT/RBAC security.
- In progress: Google Data Analytics and Google IT Support Professional Certificates.
